

FOR MORE THAN A DECADE, HONOLULU Magazine has been publishing a chart that ranks Hawai'i's public schools from best to worst. It's always been based on official state Department of Education data—math

and reading scores, and other performance measures—with a bit of our own number crunching to arrive at an overall score for each school.

When we started, this ranking wasn't available anywhere else—a valuable, informative snapshot comparison of the performances of different schools across the state—and our annual rankings have become one of the most popular stories we publish.

Then, in 2013, the state DOE unveiled a new program called Strive HI, designed to assess the performance of schools by collecting academic measures such as math and reading scores, as well as attendance, graduation rates and other important

criteria, and combining them to arrive at an overall score for each school. We replaced our own methodology with this new, more intensive one from the DOE, republishing its official rankings through this past year.

When we began preparing for this year's schools chart, we discovered that the state DOE is no longer ranking its schools through the Strive HI system. The reason: It's shifting from the old No Child Left Behind Act to a new one, the Every Student Succeeds Act, which no longer requires schools be given performance classifications.

That meant, if HONOLULU Magazine wanted to publish a new "Grading the Public Schools" chart—and we do!—we'd have to return to crunching the numbers ourselves. Fortunately, the DOE still publishes all the raw data it previously used to create the Strive HI index scores. We rolled up our sleeves and came up with our own recipe for turning all that data into a single score for each school (find a more detailed explanation of this formula on the opposite page).

Because we don't have the space to print every performance measure that went into each school's score, we selected the ones we thought families and taxpayers would be most interested in, including math, science and reading scores and graduation rates. The overall score for each school still incorporates the complete list of measures, of course—to see a detailed, full performance report for an individual school, visit hawaiipublicschools.org, or, if you want to dive into the DOE's master spreadsheet of 2015–2016 raw data, visit bit.ly/doedata.

To make it easier to compare schools in an apples-to-apples way, we've divided the list into three sections: elementary, middle and high schools. Also, because raw-number scores can sometimes be a little unwieldy, we've taken the liberty of giving each school a report-card-style letter grade, A through F, based on a curve. This isn't an official grade handed out by the DOE, but we think it's a useful shorthand when discussing how well a school is performing.

THE HONOLULU MAGAZINE

FORMULA FOR GRADING THE PUBLIC SCHOOLS

For each school, there are five categories of school performance data:

① Achievement. The percentage of a school's students proficient in math, reading and science, based on test scores.

② Growth. The median percentile that a school's students improved in math and English language arts, compared with the previous year.

③ Readiness.

a. Elementary and Intermediate: The percentage of a school's students absent for 15 or more days in a school year. **b. High School:** A combination of four factors—the four-year graduation per-

centage, the percentage of 11th grade students scoring at or above 19 on the ACT test, the college-going percentage and the five-year graduation percentage.

④ Achievement Gap Rate: The percentage gap in proficiency between a school's high-need students and non-high-need students, divided by the overall proficiency of the non-high-need students. High-need students include economically disadvantaged students, students with disabilities and students still learning the English language.

⑤ Other.

a. Elementary. A combination of two factors—the percentage of a school's students held back for a year, and the percentage of a school's third-grade students scoring "above" on the SBA English test.

b. Intermediate. The percentage of a school's students earning a C or higher in Algebra I.

c. High School. A combination of two factors—the percentage of a school's students absent for 15 or more days in a school year, and the percentage of students earning a C or higher on AP, IB, UH-course-taking or CTE concentrators.

WE WEIGHT THESE FIVE CATEGORIES ON A 400-POINT SCALE AS FOLLOWS:

ELEMENTARY SCHOOLS:

ACHIEVEMENT: 100 points
GROWTH: 200 points
READINESS: 20 points
ACHIEVEMENT GAP: 60 points
OTHER: 20 points

INTERMEDIATE SCHOOLS:

ACHIEVEMENT: 100 points
GROWTH: 180 points
READINESS: 60 points
ACHIEVEMENT GAP: 40 points
OTHER: 20 points

HIGH SCHOOLS:

ACHIEVEMENT: 100 points
GROWTH: 60 points
READINESS: 200 points
ACHIEVEMENT GAP: 20 points
OTHER: 20 points

A FEW TECHNICAL NOTES:

We largely followed the weighting rationale used by the Hawai'i state DOE in years past. You'll notice that student growth is heavily prioritized at the elementary-school level, and that, by high school, the priority shifts to real-world measures of success including graduation rates and college enrollment.

For a more detailed look at how we calculated the points awarded to schools in each category, visit our website at bit.ly/hnpublicschools.

We excluded from this chart any schools missing two or more categories of data, or missing a vital category (such as math/reading/science proficiency). This eliminated most, but not all, of the charter schools.

Several schools did not report certain categories of data (such as achievement gap) for privacy reasons. For those schools, we proportionally redistributed the potential points for that category to their other categories.

A GUIDE TO THE CHART

1 RANK: This list ranks public schools by their overall scores, with separate rankings for elementary schools, middle schools and high schools.

3 DISTRICT: The statewide school system is divided into seven administrative districts, including O'ahu's HONolulu, CEN-tral, LEEward and WINdward districts; the Big Island's HAWai'i district; Maui, Moloka'i and Lāna'i's MAUi district; and the KAUa'i district. Some CHARter schools are also included.

4 TITLE I: Indicating, Yes or No, whether the school was a Title I school in 2015–16, meaning at least 40 percent of a school's students were from low-income families, as defined by the federal government.

5 MATH, 6 READING, 7 SCIENCE: The percentage of students enrolled the full school year that scored proficient or higher in these three subjects on assessments that includes Smarter Balanced Assessments in English-Language Arts and math, HSA

science and high school Biology I end-of-course exams, HSA alternate assessments in ELA, math and science, and the Kaiapuni Assessment of Educational Outcomes.

8 MATH GROWTH, 9 READING GROWTH: A school's median (middle) student growth percentile, which measures how much individual students progressed from one year to the next, in math and ELA.

10 CHRONIC ABSENTEEISM RATE: (Elementary and Middle Schools) Indicates the percentage of students enrolled for the full school year that missed 15 or more days of school.

11 MATH GAP 12 ELA GAP RATE:

(Elementary and Middle Schools) This number measures the achievement gap between high-need students and non-high-need students for 2015–16, by comparing the percentage of each group of students who scored proficient or above in math and ELA. A smaller percentage-point spread is better.

13 ACT SCORES: (High School) The percentage of full-school-year 11th grade students who scored 19 or higher on the ACT.

14 GRADUATION RATE: (High School) The percentage of a high school's students that graduated within four years.

15 COLLEGE-GOING RATE: (High School) The percentage of a high school's graduates that enrolled in college within 16 months of graduating (in other words, within two fall semesters of college).

16 FINAL SCORE: The school's overall score, out of 400 points.

17 GRADE: A letter grade assigned by HONOLULU Magazine, based on a standard curve using the schools' index scores.

N/A: Indicates that data is not available, usually because the DOE has redacted results from small classes/schools for privacy reasons.
